

Test print

For optimal results when printing patterns, run this test on your printer:
(The printing test is recommended whenever you change printers,
computers or printing programs)

1. Print this PDF file using your normal settings.
2. Measure the sides of the square, making sure that all four sides are printed. Each side should be 10 centimeters long. If they are, your printer settings are correct and you can begin printing your patterns.
3. If the sides of the square are not exactly 10 centimeters long, or any of the four sides are not visible, take the following steps:
Depending on the program you are using, various settings are available to you. When you select "Print" you should be able access further settings (such as "Paper handling", "Printer options" or "Settings"). Select the options for Letter paper size and "Actual size" or "100%" or "Original size".
4. Repeat steps 1. and 2.
5. If the sides of the square are still not exactly 10 centimeters, or if some sides are not visible, please print from a browser such as Firefox, Safari, Chrome, ...
6. Repeat steps 1. and 2. using the browser program.
7. Now all the sides of the square should be visible and exactly 10 centimeters long.
(If they are not, it is probably due to a hardware problem with your printer. Please contact your manufacturer.)
